

Your Wireless Freedom!

Skyphone - 1000 allows you to call over Skype for free without need to sit in front of your computer.

Skype is internet communication program that is becoming more and more popular among the people all around the world. It makes communication over internet very simple and cheap, because there is no need to pay any telephone fee. You need only computer and internet connection and you can use it. The installation is mentioned in the following text.

This material is introduction of new AirLive Skyphone-1000, wireless phone that is very easy to use and allows you to leave your chair in front of computer.

This example how to use Skyphone, how to install it and experience from Belgium maybe good inspiration for Christmas present for your beloved!

Introduction

Skype, a relative known program among computer users to call people all around the world has a new piece of hardware. Ovislink Corp. developed a wireless Skype phone called AirLive Skyphone-1000 that uses the Bluetooth protocol to communicate with the PC. The phone was delivered in a retail package that included the phone, a brief manual, a USB charger cord and an USB Bluetooth dongle. Being a new product from the Airlive series from Ovislink the used the same colors as the stereo Bluetooth headset, White. The phone weights almost nothing, has a built in LI-ION battery pack and has a display to show all Skype information you want it to.

How to use

Installing Skype is very easy, you download the executable installer file from www.skype.com and when running it the first time it will ask you to create a Skype account. When you're done with that, you install the included driver CD, plug in the USB dongle and turn the phone on. Skype directly asks you whether or not you want to use the phone with Skype. When you accept the phone will show your account name and is ready to use. You don't need to connect the phone because it connects automatically with the included dongle. And you've got a wide range of language you can select from.

Display features

The display integrated on the phone is able to show the information you want it to. And it even has its own little operating system which allows you to setup your phone at wish. You've got five ringtones you can choose from; you can check your missed calls, check upon your last calls and view your contact list. When you want to call with the phone you can easily look in to your contact list or in your "recently called" list without checking your computer. Or you can just dial a number you want, Skype will perform the call, while all you've got to do is operate the phone like every other phone.

Everyday use

The AirLive Skyphone-1000 can be used everywhere you want it to. Mine is always connected and I walk around the office with it. When I'm to far away from my PC it will result in a loss of sound quality, but the display always shows the connection strength. The battery life is better then expected. I can walk around the entire day without recharging and the best of all, I've got so many hours of talking time.

Conclusion

This phone is the tool I've been waiting for, now I can get the full functionality out of Skype. If someone needs to call, I just hand them my AirLive Skyphone-1000 and they're ready to go. And not to mention the battery life, which is very good for a

feather light phone. This phone deserves a 10/10! We would like to thank Ovislink (<http://www.ovislink.be>) for sending us the AirLive Skyphone-1000.

Skyphone-1000

Are you still talking Skype only in front of PC for acceptable communication with friends? GOOD NEWS! AirLive Skyphone-1000 is now presenting you a perfect choice for applying Skype wirelessly. You no more need feel complex while arranging wired USB phones or the Bluetooth earsets which can only receive calls. AirLive Skyphone-1000 demonstrates easy-to-use but helpful functions for you.

Key Features

❖ Extra Long Battery Life

The Skyphone-1000 is equipped with high capacity Lithium Polymer rechargeable battery. When using advanced power saving modes, the handset is able to last up to one week of standby time. The Lithium-Polymer battery offers memory-free recharging and much longer battery life.

❖ Complete Control over Skype

You simply plug in the USB dongle into PC and install the utility then the Skyphone-1000 will take complete control over your Skype phone calls. The stylish handset is equipped with a large blue backlit LCD which displays contact list, incoming number, address book, call history, signal strength, and battery life, etc. Furthermore, it supports 13 different languages on display. You can even choose different ring tones for different groups by personally preference.

❖ Light Weight Ergonomic

The Skyphone-1000 weights 89g; therefore, it is much lighter to use for long period comparing to DECT Phone solutions. The handset is ergonomically shaped with soft contours to fit in your hand.

❖ Stable Voice Quality

The Skyphone-1000 uses frequency hopping wireless technology and advanced Echo cancellation technique to provide high voice quality. Up to 7 pairs of Skyphones can be used in the same location. The wireless distance can last up to 15 meter indoor and 30 meter outdoor.

**BUT MORE, YOU CAN USE SKYPHONE-1000!
ANYWHERE IN YOUR HOME.**
