Q: I have an ISP's wireless signal near my house, how could I connect WL-5470AP to internet?

A:

1. We recommend that please set WL-5470AP as WISP mode, and configure the WAN setting.
In WISP mode, WL-5470AP provides five WAN access types to connect to internet.
For example:
    PPPoE: You have to input the user name and password to get internet access from ISP.
    DHCP Client: The client will get DHCP from ISP.
    Static IP: You have to input the static IP address to connect internet.
Please select a suitable WAN access type to establish internet connection.

2. Then please connect WL-5470AP to ISP's wireless signal, and get into the Status page of WL-5470AP to check whether WL-5470AP get public IP from ISP successfully.

If WL-5470AP could not get public IP successfully, please check whether the WAN settings and security settings are correct.
You might need to contact with the ISP about the situation.

If WL-5470AP get public IP successfully, please set your PC's IP address as "Obtain an IP address Automatically" and set DNS Server as "Obtain DNS Server address Automatically".
Then please try to open your browser to connect internet.
