

Q : When I login the HTTPS web management of Router, there's a message about wrong security certificate ,what can I do?

A :

- The https web management of Router is using a self-signed certificate. The certificate is not in the trusted certificate list of Microsoft, so there is a message about wrong security certificate. But the information of the https web management is still secured.
- When you login the https web management, please choose **Continue to this website (not recommended)**, as below picture:

Then you could get into the https web management.
