

RS-3000 Anti-Spam Mechanism

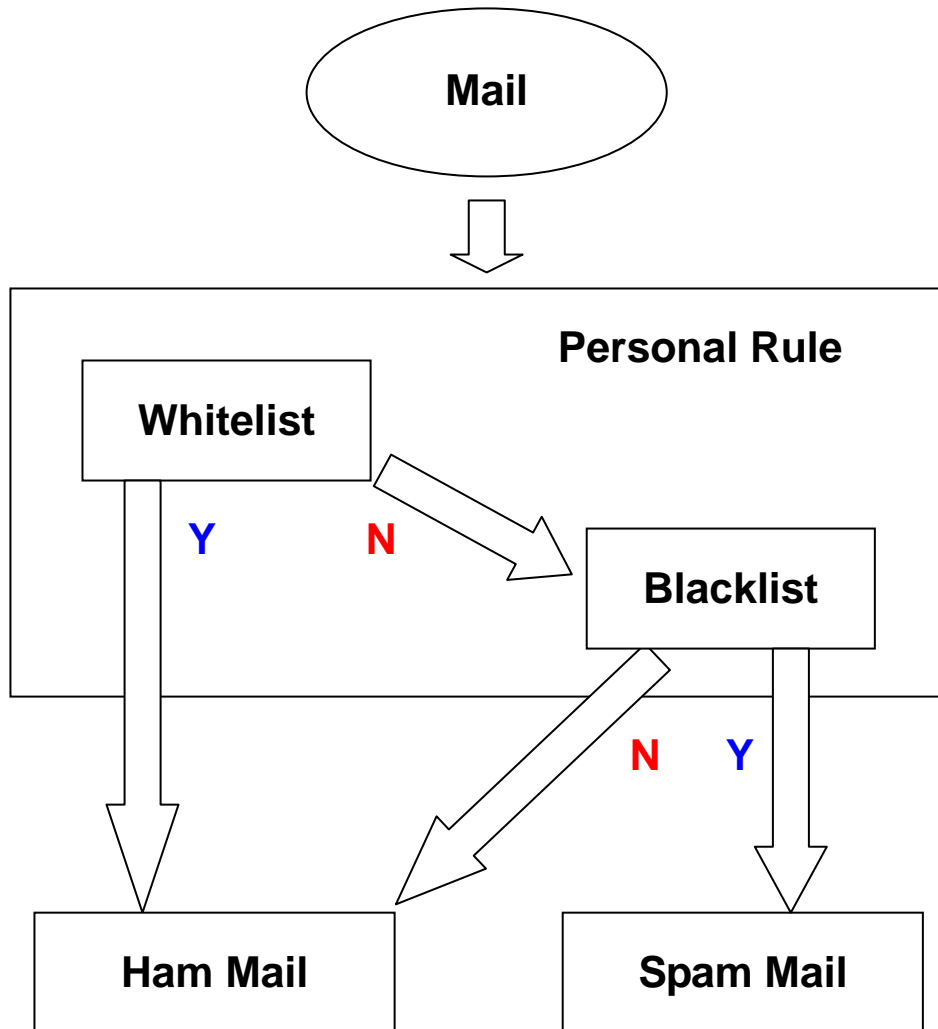

Default Rule

While mail arrives to RS-3000, the system will check mail content and calculate the score based on the default rule. If the score reaches to a standard or higher, the mail will be judged as spam mail.

Personal Rule

Except standard rule, the administrator can also decide to use **Personal Rule** as the first priority to filter mail, such as Whitelist, Blacklist, and the customized rule.

Anti-Spam rule to combine Personal rule and system rule

If Personal rule and all Anti-spam rules are enabled, when mail does not match to Personal rule, the mail will follow the flow chart to be filtered step by step, to make sure the filtered result can be precisely as possible.
