

# How to Configure DMZ in WL1500R

Please follow the step and try again

check your DMZ host ip address

On your DMZ server

1. use start -> run
2. keyin **cmd** and press enter
3. key in **ipconfig** and press start

4.

```
Connection-specific DNS Suffix . : 
IP Address. . . . . : 192.168.1.100
Subnet Mask . . . . . : 255.255.255.0
Default Gateway . . . . . : 192.168.1.254
```

5. show your ip address  
(like 192.168.1.100)

On your WL-1500R

1. Go to Access control page -> DMZ
2. click "Enable" button and keyin ip address(like 192.168.1.100) and press apply button

3.

A screenshot of a network configuration window titled "DMZ". The window has a light gray border and a white background. At the top, the title "DMZ" is displayed in blue. Below the title, there are two radio buttons for the "Enabled" status. The first radio button is selected and has a green dot, followed by the text "Enabled". The second radio button is unselected and has a gray dot, followed by the text "Disabled". Below this, there is a label "DMZ Host IP :" followed by a text input field containing the IP address "192.168.1.100". At the bottom right of the window, there is a green button with a white checkmark icon and the text "Apply".

DMZ

Enabled : ☒ Enabled ☐ Disabled
