

Q: How to block https web site?

A: Please log in the web management, and get into the Security Setting page.  
Please configure Domain Filter to block it.

For example: please refer the picture to block Facebook:

The screenshot shows the 'Domain Filter' configuration page in the Air Live web management interface. The page title is 'N450R 3T3R Wireless-N Dual Band Gigabit Router'. The navigation menu includes 'ADMINISTRATOR'S MAIN MENU', 'Status', 'Wizard', 'Advanced', 'Logout', and 'English'. The main menu has 'BASIC SETTING', 'FORWARDING RULES', 'SECURITY SETTING', 'ADVANCED SETTING', 'NAS', and 'TOOLBOX'. The left sidebar shows a tree view with 'Status', 'Packet Filters', 'Domain Filters', 'URL Blocking', 'MAC Control', and 'Miscellaneous'. The 'Domain Filter' section is expanded, showing a table with the following data:

Item	Setting
Domain Filter	<input checked="" type="checkbox"/> Enable
Log DNS Query	<input type="checkbox"/> Enable
Privilege IP Addresses Range	From <input type="text"/> To <input type="text"/>

ID	Domain Suffix	Action	Enable	Use Rule#
1	<input type="text" value="www.facebook.com"/>	<input checked="" type="checkbox"/> Drop <input type="checkbox"/> Log	<input checked="" type="checkbox"/>	(0) Always <input type="button" value="v"/>
2	<input type="text"/>	<input type="checkbox"/> Drop <input type="checkbox"/> Log	<input type="checkbox"/>	(0) Always <input type="button" value="v"/>
3	<input type="text"/>	<input type="checkbox"/> Drop <input type="checkbox"/> Log	<input type="checkbox"/>	(0) Always <input type="button" value="v"/>
4	<input type="text"/>	<input type="checkbox"/> Drop <input type="checkbox"/> Log	<input type="checkbox"/>	(0) Always <input type="button" value="v"/>
5	<input type="text"/>	<input type="checkbox"/> Drop <input type="checkbox"/> Log	<input type="checkbox"/>	(0) Always <input type="button" value="v"/>

After configuring, please save the change and reboot AP to take effect.
