

How to save wireless settings in client mode

1. Click on Profile Settings on the Wireless Settings Menu. Then click on “Add” to add a new profile

The screenshot shows a window titled "Profile Setting". At the top, there is a "Profile List" table with the following columns: Profile, SSID, Channel, Authentication, Encryption, and Network Type. Below the table, there are five buttons: Add, Delete, Edit, Activate, and Close.

2. On the Add profile page, please enter the information about the remote AP network such as SSID, encryption. Click on “Apply” once finished

The screenshot shows a window titled "Add Profile". It contains the following fields and options:

- Profile Name: PROF001
- SSID: airlive
- Network Type: Infrastructure (dropdown menu)
- Power Saving Mode: CAM (Constantly Awake Mode), Power Saving Mode
- RTS Threshold: Used, 2347 (range 1 - 2347, default 2347)
- Fragment Threshold: Used, 2346 (range 256 - 2346, default 2346)
- Security Mode: WPA2-Personal (dropdown menu)
- WPA Algorithms: TKIP, AES
- Pass Phrase: [masked] (8~63 ASCII or 64 HEX characters)

At the bottom, there are two buttons: Apply and Cancel.

3. Once apply the new profile should appear on the list. Select the profile and click on “Activate” button to take effect. Only one profile can be activated at a time.

Profile Setting

Profile List						
	Profile	SSID	Channel	Authentication	Encryption	Network Type
<input checked="" type="radio"/>	PROF001	airlive	Auto	WPA2-PSK	AES	Infrastructure
<input type="radio"/>	PROF002	airlive2	Auto	WPA-PSK	TKIP	Infrastructure
