

Sky-211

Skype Phone Gateway

The Sky-211 is a complete solution to let you use ordinary phone with the Skype service. Simply connect your home phone (wire or cordless) to the FXS port, connect the telephone line to the FXO port, and the USB port to your PC. Then, you can receive both normal phone call and Skype call at the same time!

When a phone call come in from Skype or regular PSTN line, your phone will ring to notify you of the incoming call. You can have 3-way conference between the normal phone and Skype phone at the same time! The gateway can even forward instant message to your mobile phone via SMS. Intelligent bridging features enable conference calling and call switching without a subscription fee.
