

Skyphone-1000

Wireless Skype Phone

Are you still staying in front of your computer to talk Skype VoIP? From now, stop using those annoying wired USB phones that require you to stay with your PC; or the Bluetooth earsets that can only receive calls. What you need is an easy-to-use Skype handset that gives you complete control over Skype wirelessly. AirLive Skyphone-1000 is your perfect choice.

Complete Control over Skype

Backlit LCD Display

The Skyphone-1000 is a complete wireless Skype solution that includes an USB dongle and a Handset. Simply plug in the USB dongle into your PC and install the utility. Then the Skyphone-1000 will take complete control over your Skype phone calls. The stylish handset is equipped with a large blue color backlit LCD that can display Contact List, Incoming Number, Address book, Call History, Signal Strength, Battery life..... just like the functions on a mobile phone. It supports 13 different languages on display. You can even choose different Ring Tones for different groups. Furthermore, the keypad are completely customized to Skype so that one press will bring you all the major Skype functions. You will never have to go in front of your PC again to control any Skype functions.

Extra Long Battery Life

The Skyphone-1000 is equipped with high capacity Lithium Polymer rechargeable battery. When in use with advanced power saving modes, the handset can last up to one week of standby time. Unlike other vendor that uses NiMH batteries which have memory effects problems. The Lithium-Polymer battery offers memory-free recharging and much longer battery life.

Stable Voice Quality

The Skyphone-1000 uses frequency hopping wireless technology and advanced Echo cancellation technique to provide high voice quality. Up to 7 pairs of Skyphones can be used in the same location. The wireless distance can last up to 15 meter indoor and 30 meter outdoor.

Light Weight Ergonomic

The Skyphone-1000S weights in only at 89g; therefore, it is much lighter to use for long period comparing to DECT Phone solutions. The handset are ergonomically shaped with soft contours to fit in your hand. This is one phone you can use comfortably for long hours .

Comparing to WiFi Skype phones, the Skyphone-1000 is much easier to install and support all current/future versions of Skype. It is truly a must have product if you uses Skype or other PC-base VoIP services**.

** Skype is a registered trademark of Skype Technologies SA*

*** Works as a MIC/Headset only for other messenger services.*
